

Questions for participants

Section 1: Demographics & Experience

To be completed before starting the programming task.

1. **Current Status:** Are you currently a student or working in the industry? student
 2. **Field of Study / Job Title:** What is your major or current role? Software engineer student
 3. **Professional Experience:** How many years of professional experience do you have (including internships or full-time work)? 0
 4. **LLM Familiarity:** On a scale of 1–5, how frequently do you use AI tools (e.g., ChatGPT, Claude) for coding or software tasks? 4
 5. **Requirements Engineering (RE) Experience:** Have you taken a course in RE or used formal specifications? If so, are you familiar with **IEEE 29148** or **User Story** structures? Yes , yes
-

Section 2: Post-Task Evaluation

To be completed after receiving the AI-generated code.

1. **Feature Coverage:** Describe the extent to which the AI-generated code implemented the functionality. Were there specific features missing?

For task 1, GPT did a good a job implementing the UI, discounts types, and user types. However it failed to separate the concerns, and all features were placed in the same place instead of having a flow between them. It also failed to make a reliable payment system which would validate payment information. This is mostly because it had no access to banking information to check the validity of the payment information.

For task 2, The UI didnt really work, and after prompt 2, there was a bug, so the system didnt run properly. It also did some extra stuff like using http requests, which I never told it to. After prompt 2, the app wasnt really reactive and was running on mock data, and I was not able to use it. It was like a series of print commands. Prompt 3 did not change the results, as it didnt change the code but just told me what to change (which I want allowed to do). Overall, there was still a need for a couple more prompts to get a satisfying result.

2. **Requirement / Vision Impact:** Which specific part of the Vision (or requirement for Group B) was most helpful in guiding the AI to handle the assigned task correctly?

The first prompt was the most important, where I was the most thorough in my request. After that, it became minor vibing for tiny adjustments to reach the satisfying result in the details.

3. **Challenges:**

- **Intuitive:** Did you find the vision text too broad or unclear for writing an effective AI prompt? Please describe.
 - i. Some parts of the vision text were open for interpretation, so I made assumptions, such as what info the students need to register.
- **REQC-Guided:** Did you encounter difficulties translating the vision into structured requirements? Please describe.
 - i. No difficulties in translating the vision (just tiring to write the requirements).

4. **Coverage Confidence:** What specific evidence in the generated code gives you confidence (or lack thereof) that the requirements were met?

My confidence came from interacting with the UI(s).

5. **Estimated Coverage:** What percentage of the requirements do you believe were successfully covered by the AI-generated code? (75%)

6. **Coverage Gaps:** If the code did not cover all requirements, why do you think that happened? (e.g., prompt too vague, AI limitations, misinterpretation)

Prompt was perhaps too vague, but I didnt want to get into design. Also, the AI tends to hallucinate which it did. I had to tell it to remove some parts.
