

Questions for participants

Section 1: Demographics & Experience

To be completed before starting the programming task.

1. **Current Status:** Are you currently a student or working in the industry? Student
 2. **Field of Study / Job Title:** What is your major or current role? Software engineering and management
 3. **Professional Experience:** How many years of professional experience do you have (including internships or full-time work)? 6 months
 4. **LLM Familiarity:** On a scale of 1–5, how frequently do you use AI tools (e.g., ChatGPT, Claude) for coding or software tasks? 4
 5. **Requirements Engineering (RE) Experience:** Have you taken a course in RE or used formal specifications? If so, are you familiar with **IEEE 29148** or **User Story** structures? Yes , yes
-

Section 2: Post-Task Evaluation

To be completed after receiving the AI-generated code.

1. **Feature Coverage:** Describe the extent to which the AI-generated code implemented the functionality. Were there specific features missing? Overall it did a good job at first glance, however without proper implementation, test, and an actual app to test it on i cant be sure. It did miss some features, such as JWT on first prompt, although I didn't specifically ask for it. It gave me suggestions of things that I didn't ask, but good ideas.
2. **Coverage Gaps:** If the code did not cover all requirements, why do you think that happened? (e.g., prompt too vague, AI limitations, misinterpretation) Its likely due to missing context, and thus I could have prompted it better. Although with the limited context for me and the 3 prompt limit somethings are bound to be missed.
3. **Coverage Confidence:** What specific evidence in the generated code gives you confidence (or lack thereof) that the requirements were met? The code the LLM gave me looked complete, however, without a way of testing it thoroughly i cant be sure
4. **Estimated Coverage:** What percentage of the requirements do you believe were successfully covered by the AI-generated code? (___ 80 %) if everything works as its supposed to do
5. **Requirement / Vision Impact:** Which specific part of the Vision (or requirement for Group B) was most helpful in guiding the AI to handle the assigned task correctly? The clear constrains and requirements. Such as, was to be able to handle high traffic at peak times, security for user information, categorization of users
6. **Challenges:**

- **Intuitive:** Did you find the vision text too broad or unclear for writing an effective AI prompt? Please describe. The questions were clear, although the framing of the experiment allowed for only so much freedom in writing the prompts and assumptions. Ex. no assumptions allowed in first text, only 3 prompts
- **REQC-Guided:** Did you encounter difficulties translating the vision into structured requirements? Please describe. I found the second text to be more difficult, due to the fact that I had more freedom. This caused me to second guess myself in what is missing and if am actually covering all I could be covering, The fact that im rusty in writing requirements did not help.
