

Questions for participants

Section 1: Demographics & Experience

To be completed before starting the programming task.

1. **Current Status:** Are you currently a student or working in the industry?
 - a. Student
 2. **Field of Study / Job Title:** What is your major or current role?
 - a. Software Engineering and Management
 3. **Professional Experience:** How many years of professional experience do you have (including internships or full-time work)?
 - a. 0 years
 4. **LLM Familiarity:** On a scale of 1–5, how frequently do you use AI tools (e.g., ChatGPT, Claude) for coding or software tasks?
 - a. 4
 5. **Requirements Engineering (RE) Experience:** Have you taken a course in RE or used formal specifications? If so, are you familiar with **IEEE 29148** or **User Story** structures?
 - a. Yes, I took a requirements course in my first year as a SEM student. I am also familiar with the structures.
-

Section 2: Post-Task Evaluation

To be completed after receiving the AI-generated code.

1. **Feature Coverage:** Describe the extent to which the AI-generated code implemented the functionality. Were there specific features missing?
 - The AI generated the code as required. I asked AI to generate a single function and the generated function performs the required task. However, in the second task I only got the function at first and not the whole code including main.
2. **Coverage Gaps:** If the code did not cover all requirements, why do you think that happened? (e.g., prompt too vague, AI limitations, misinterpretation)
 - It was due to a mistake in my prompt. I asked the AI to implement a function that does a specific task but I forgot that in this way, I restrained the AI to the function only and no other helper functions.
3. **Coverage Confidence:** What specific evidence in the generated code gives you confidence (or lack thereof) that the requirements were met?
 - The comments provided per-section of the code makes it easier to track the tasks implemented. Therefore, I tracked the tasks and it looked like everything I asked for was covered.

4. **Estimated Coverage:** What percentage of the requirements do you believe were successfully covered by the AI-generated code? (___ %) 95
 - 60% of all the requirements I based the AI.
5. **Requirement / Vision Impact:** Which specific part of the Vision (or requirement for Group B) was most helpful in guiding the AI to handle the assigned task correctly?
 - I believe that this requirement was the most important one: “3. The system shall have user types common user, elderly, student and youth (10-19).”
6. **Challenges:**
 - **Intuitive:** Did you find the vision text too broad or unclear for writing an effective AI prompt? Please describe.
 - **REQC-Guided:** Did you encounter difficulties translating the vision into structured requirements? Please describe.

-> for the first task, yes. I felt that the vision was too vague. For example, it wasn't clear the structure of the messages. Additionally, I felt like I was missing more details about the campus, how many buildings there are which could have helped in the logic for finding closest volunteer.
