

## Questions for participants

### Section 1: Demographics & Experience

*To be completed before starting the programming task.*

1. **Current Status:** Are you currently a student or working in the industry?

Yes, I'm a student.

2. **Field of Study / Job Title:** What is your major or current role?

Software engineering student and research assistant in automotive systems.

3. **Professional Experience:** How many years of professional experience do you have (including internships or full-time work)?

Around a year (TA and research assistant).

4. **LLM Familiarity:** On a scale of 1–5, how frequently do you use AI tools (e.g., ChatGPT, Claude) for coding or software tasks?

4

5. **Requirements Engineering (RE) Experience:** Have you taken a course in RE or used formal specifications? If so, are you familiar with **IEEE 29148** or **User Story** structures?

Yes.

---

### Section 2: Post-Task Evaluation

*To be completed after receiving the AI-generated code.*

1. **Feature Coverage:** Describe the extent to which the AI-generated code implemented the functionality. Were there specific features missing?

Not really. For the first question, the prompt was shorter, which affected the level of detail in the coding answer and focused strictly on the basic functionality of the system.

2. **Coverage Gaps:** If the code did not cover all requirements, why do you think that happened? (e.g., prompt too vague, AI limitations, misinterpretation)

I think the quality of the results heavily depends on the prompting. The more context is given to the AI, the better it can fulfil the coding task.

3. **Coverage Confidence:** What specific evidence in the generated code gives you confidence (or lack thereof) that the requirements were met?

The code included comments that outlined the functionality of each method, which acted as the main evidence that the requirements were satisfied.

4. **Estimated Coverage:** What percentage of the requirements do you believe were successfully covered by the AI-generated code? maybe 60-70 %
5. **Requirement / Vision Impact:** Which specific part of the Vision (or requirement for Group B) was most helpful in guiding the AI to handle the assigned task correctly?
6. **Challenges:**

- **Intuitive:** Did you find the vision text too broad or unclear for writing an effective AI prompt? Please describe.

No, it outlined the main functionalities and brief explanations of the usability of the system in different situations, so I considered it to be effective.

- **REQC-Guided:** Did you encounter difficulties translating the vision into structured requirements? Please describe.

No, the vision was descriptive and straight to the point; it was easy to extract functional requirements from the text.
