

Questions for participants

Section 1: Demographics & Experience

To be completed before starting the programming task.

1. **Current Status:** Are you currently a student or working in the industry? **I'm a student.**
 2. **Field of Study / Job Title:** What is your major or current role? **Software engineering and management**
 3. **Professional Experience:** How many years of professional experience do you have (including internships or full-time work)? **No experience.**
 4. **LLM Familiarity:** On a scale of 1–5, how frequently do you use AI tools (e.g., ChatGPT, Claude) for coding or software tasks? **3**
 5. **Requirements Engineering (RE) Experience:** Have you taken a course in RE or used formal specifications? If so, are you familiar with **IEEE 29148** or **User Story** structures? **Yes, I have done a course in the first year of the program.**
-

Section 2: Post-Task Evaluation

To be completed after receiving the AI-generated code.

1. **Feature Coverage:** Describe the extent to which the AI-generated code implemented the functionality. Were there specific features missing? **When I looked through the code it seemed like there were no features missing.**
2. **Coverage Gaps:** If the code did not cover all requirements, why do you think that happened? (e.g., prompt too vague, AI limitations, misinterpretation) **If it did not cover then it could be because of misinterpretation.**
3. **Coverage Confidence:** What specific evidence in the generated code gives you confidence (or lack thereof) that the requirements were met? **When comparing with the vision, I could see that the necessary parts were there, like the right imports and functions.**
4. **Estimated Coverage:** What percentage of the requirements do you believe were successfully covered by the AI-generated code? (___ %) **80% for both**
5. **Requirement / Vision Impact:** Which specific part of the Intuitive prompt (or requirements for Vision 2) was most helpful in guiding the AI to handle the assigned task correctly? **I think explaining the different ticket types was helpful for the AI since it would probably just guess otherwise.**
6. **Challenges:**

- **Intuitive:** Did you find the vision text too broad or unclear for writing an effective AI prompt? Please describe. **It was a little vague so I did have to make some assumptions.**
- **REQC-Guided:** Did you encounter difficulties translating the vision into structured requirements? Please describe. **No, not really, I just went sentence by sentence and remade it into requirements.**
