

Questions for participants

Section 1: Demographics & Experience

To be completed before starting the programming task.

1. **Current Status:** Are you currently a student or working in the industry?
Student
 2. **Field of Study / Job Title:** What is your major or current role?
Software Engineering and Management
 3. **Professional Experience:** How many years of professional experience do you have (including internships or full-time work)?
No
 4. **LLM Familiarity:** On a scale of 1–5, how frequently do you use AI tools (e.g., ChatGPT, Claude) for coding or software tasks?
3.7
 5. **Requirements Engineering (RE) Experience:** Have you taken a course in RE or used formal specifications? If so, are you familiar with **IEEE 29148** or **User Story** structures?
Yes, yes
-

Section 2: Post-Task Evaluation

To be completed after receiving the AI-generated code.

1. **Feature Coverage:** Describe the extent to which the AI-generated code implemented the functionality. Were there specific features missing?

I think it implemented it correctly, but I didn't look through it very well.
2. **Coverage Gaps:** If the code did not cover all requirements, why do you think that happened? (e.g., prompt too vague, AI limitations, misinterpretation).

I would say that there might have been misinterpretations or some contradictions in the requirements that I gave the AI. I think the AI could have implemented it if I gave it good instructions.
3. **Coverage Confidence:** What specific evidence in the generated code gives you confidence (or lack thereof) that the requirements were met?

I just looked through it generally (only task 1, not task 2). But it looked like it included

all of the specified requirements.

4. **Estimated Coverage:** What percentage of the requirements do you believe were successfully covered by the AI-generated code? (___ %).

I'm hoping for 100% in task 1, in task 2 I expect a bit lower, but not the worst, maybe 70%.

5. **Requirement / Vision Impact:** Which specific part of the Vision (or requirement for Group B) was most helpful in guiding the AI to handle the assigned task correctly?

The overview of the system I think is the most helpful because it gives the AI an idea of what it should do and how it should do it. I think that specific tasks are more difficult for AI in general.

6. **Challenges:**

- **Intuitive:** Did you find the vision text too broad or unclear for writing an effective AI prompt? Please describe.

I think it was alright, but there were some parts that I personally was a bit confused with and had to double check with the supervisors.

- **REQC-Guided:** Did you encounter difficulties translating the vision into structured requirements? Please describe.

Personally I think I'm better at giving general instructions (not in requirements format). I feel like it is easier to catch everything if I just write it without any specific format, while it's more difficult to make sure everything is covered when writing requirements. But that might just be me.

- Sidenote: Dear god, please press enter once or twice after the questions for the answers, ok? :) I did it for you this time.
