

Questions for participants

Section 1: Demographics & Experience

To be completed before starting the programming task.

1. **Current Status:** Are you currently a student or working in the industry?

I am student - second year of SEM

2. **Field of Study / Job Title:** What is your major or current role?

Software Engineering and Management

3. **Professional Experience:** How many years of professional experience do you have (including internships or full-time work)?

2 years

4. **LLM Familiarity:** On a scale of 1–5, how frequently do you use AI tools (e.g., ChatGPT, Claude) for coding or software tasks?

3

5. **Requirements Engineering (RE) Experience:** Have you taken a course in RE or used formal specifications? If so, are you familiar with **IEEE 29148** or **User Story** structures?

yes

Section 2: Post-Task Evaluation

To be completed after receiving the AI-generated code.

1. **Feature Coverage:** Describe the extent to which the AI-generated code implemented the functionality. Were there specific features missing?

No, mostly everything I asked for was implemented.

2. **Coverage Gaps:** If the code did not cover all requirements, why do you think that happened? (e.g., prompt too vague, AI limitations, misinterpretation)

I guess most of the cases that AI couldn't manage to implement are because of the prompts that are too vague. Prompt engineering is a skill that not everyone has.

3. **Coverage Confidence:** What specific evidence in the generated code gives you confidence (or lack thereof) that the requirements were met?

I do believe that most of what I wanted are implemented. ChatGPT, at the end, clearly explained what the app can do after running it.

4. **Estimated Coverage:** What percentage of the requirements do you believe were successfully covered by the AI-generated code? (___ %) 95

> 90%

5. **Requirement / Vision Impact:** Which specific part of the Vision (or requirement for Group B) was most helpful in guiding the AI to handle the assigned task correctly?

I decided to use bullet points + requirements such as sentences like “The system shall ...”

6. **Challenges:**

- **Intuitive:** Did you find the vision text too broad or unclear for writing an effective AI prompt? Please describe.
 - i. Partly. I could understand the main point of the required app but it was too broad and I had to come up with my own requirements based on my experience.
- **REQC-Guided:** Did you encounter difficulties translating the vision into structured requirements? Please describe.
 - i. No, not really.
