

## Questions for participants

### Section 1: Demographics & Experience

*To be completed before starting the programming task.*

1. **Current Status:** Are you currently a student or working in the industry? **I'm a student**
  2. **Field of Study / Job Title:** What is your major or current role? **Bachelor in computer science.**
  3. **Professional Experience:** How many years of professional experience do you have (including internships or full-time work)? **Worked as a teacher at Hello World to teach kids programming and also being a TA at university.**
  4. **LLM Familiarity:** On a scale of 1–5, how frequently do you use AI tools (e.g., ChatGPT, Claude) for coding or software tasks? **3**
  5. **Requirements Engineering (RE) Experience:** Have you taken a course in RE or used formal specifications? If so, are you familiar with **IEEE 29148** or **User Story** structures? **Yes I have.**
- 

### Section 2: Post-Task Evaluation

*To be completed after receiving the AI-generated code.*

1. **Feature Coverage:** Describe the extent to which the AI-generated code implemented the functionality. Were there specific features missing? **It was pretty good. I think for the first one, maybe I wasn't clear, or maybe there was too much information Like helpers, volunteers, like the system doesn't crash. It was like too many functionalities maybe. But otherwise, I think it did pretty okay.**
2. **Coverage Gaps:** If the code did not cover all requirements, why do you think that happened? (e.g., prompt too vague, AI limitations, misinterpretation). **It covered pretty much all the requirements.**
3. **Coverage Confidence:** What specific evidence in the generated code gives you confidence (or lack thereof) that the requirements were met? **like for example, for the, uh, privacy ones where I was like, oh, the user's like privacy would be based on GDPR or like their passwords should be protected, like it did hashing.**
4. **Estimated Coverage:** What percentage of the requirements do you believe were successfully covered by the AI-generated code? **(90 %)**
5. **Requirement / Vision Impact:** Which specific part of the Vision (or requirement for Group B) was most helpful in guiding the AI to handle the assigned task correctly? **I think like the different ticket types and the different descriptions for senior, students**

and like these different categories, as well as how the system should be managed, yeah, the users and concurrency. Yeah, those were pretty good.

6. **Challenges:**

- **Intuitive:** Did you find the vision text too broad or unclear for writing an effective AI prompt? Please describe. **The first one maybe is a bit more difficult to have an A, like a prompt written for that. But otherwise, I think the second one was pretty clear. I think the first one was trying to do too many things at the same time.**
- **REQC-Guided:** Did you encounter difficulties translating the vision into structured requirements? Please describe. **A little bit for the first one, I think it was a bit more difficult. I mean, I didn't do it as requirements so maybe that's why it was harder.**
