

Questions for participants

Section 1: Demographics & Experience

To be completed before starting the programming task.

1. **Current Status:** Are you currently a student or working in the industry? **Currently a student.**
 2. **Field of Study / Job Title:** What is your major or current role? **Third year of Software engineering and management.**
 3. **Professional Experience:** How many years of professional experience do you have (including internships or full-time work)? **Nope.**
 4. **LLM Familiarity:** On a scale of 1–5, how frequently do you use AI tools (e.g., ChatGPT, Claude) for coding or software tasks? **2**
 5. **Requirements Engineering (RE) Experience:** Have you taken a course in RE or used formal specifications? If so, are you familiar with **IEEE 29148** or **User Story** structures? **Yeah a while back in the first year.**
-

Section 2: Post-Task Evaluation

To be completed after receiving the AI-generated code.

1. **Feature Coverage:** Describe the extent to which the AI-generated code implemented the functionality. Were there specific features missing? **The AI-generated code captured the general purpose of the system, but some parts felt more like a prototype than a finished implementation.**
2. **Coverage Gaps:** If the code did not cover all requirements, why do you think that happened? (e.g., prompt too vague, AI limitations, misinterpretation). **I think the issue was partly due to the AI interpreting the prompts differently than I intended. Some requirements were implied rather than directly stated.**
3. **Coverage Confidence:** What specific evidence in the generated code gives you confidence (or lack thereof) that the requirements were met? **My confidence mainly came from seeing how the different modules connected together logically.**
4. **Estimated Coverage:** What percentage of the requirements do you believe were successfully covered by the AI-generated code? (___ %) **Around 90%**
5. **Requirement / Vision Impact:** Which specific part of the Intuitive prompt (or requirements for Vision 2) was most helpful in guiding the AI to handle the assigned task correctly? **The most useful part was the focus on scalability**
6. **Challenges:**

- **Intuitive:** Did you find the vision text too broad or unclear for writing an effective AI prompt? Please describe. **It was difficult to translate into exact prompts because it focused more on goals and user experience than on technical implementation.**
- **REQC-Guided:** Did you encounter difficulties translating the vision into structured requirements? Please describe. **Yes. Turning the broader vision into measurable and specific requirements took time, and I sometimes felt unsure whether I had interpreted the vision correctly.**
