

Questions for participants

Section 1: Demographics & Experience

To be completed before starting the programming task.

1. **Current Status:** Are you currently a student or working in the industry? Currently I'm a student
 2. **Field of Study / Job Title:** What is your major or current role? Bachelor Software Engineering and Management student
 3. **Professional Experience:** How many years of professional experience do you have (including internships or full-time work)? 1 month
 4. **LLM Familiarity:** On a scale of 1–5, how frequently do you use AI tools (e.g., ChatGPT, Claude) for coding or software tasks? Fairly often however not on daily basis
 5. **Requirements Engineering (RE) Experience:** Have you taken a course in RE or used formal specifications? If so, are you familiar with **IEEE 29148** or **User Story** structures? I have taken single course in RE and used User Stories as my knowledge structure
-

Section 2: Post-Task Evaluation

To be completed after receiving the AI-generated code.

1. **Feature Coverage:** Describe the extent to which the AI-generated code implemented the functionality. Were there specific features missing? The functionality was implemented very well since the prompts were quite specific in regards to the requirements.
2. **Coverage Gaps:** If the code did not cover all requirements, why do you think that happened? (e.g., prompt too vague, AI limitations, misinterpretation) The code didn't cover everything, especially because of the AI limitations which didn't fully allow to finish the requirement.
3. **Coverage Confidence:** What specific evidence in the generated code gives you confidence (or lack thereof) that the requirements were met? I would say that comments tell a lot since they describe the functionality of each part in code, allowing me to track if the functions I requested were fulfilled.
4. **Estimated Coverage:** What percentage of the requirements do you believe were successfully covered by the AI-generated code? (80-85%)
5. **Requirement / Vision Impact:** Which specific part of the Vision (or requirement for Group B) was most helpful in guiding the AI to handle the assigned task correctly? The description of the task helped a lot in putting me in the situation and clarifying it as well as the fact that the vision was very thorough which helped to make requirements easier.
6. **Challenges:**

- **Intuitive:** Did you find the vision text too broad or unclear for writing an effective AI prompt? Please describe. The vision was well described in terms of information provided, however some parts seemed repetitive sometimes which made reading the vision confusing sometimes. Otherwise it was very clear and understandable.
- **REQC-Guided:** Did you encounter difficulties translating the vision into structured requirements? Please describe. It wasn't easy since the text was very clear to track and understand. It was also very intuitive which allowed me to create my own vision on how the requirement should look like.
